Skills

Languages

Python · Java · C++ · JavaScript · Dart · PHP

Backend & APIs

Python · FastAPI · REST APIs · Node.js

Databases

Neo4j · PostgreSQL · MySQL · MongoDB

DevOps & Data

Docker · Linux · Git · CI/CD · UV · Make

Profile

Backend Engineer with 3+ years of professional experience at iCog Labs building Python/FastAPI services, biomedical knowledge graph pipelines, Neo4j loading workflows, Dockerized systems, and automation for research-driven products. B.Sc. Computer Science graduate from Addis Ababa University, 2024. UAE residency visa holder with a twofour54 Software Developer license, available for UAE, remote, or hybrid backend engineering roles.

Experience

Backend/Data Platform Engineer - BioCypher KG

iCog Labs / Rejuve.Bio | 2023 to Present

- Built backend/data workflows for a BioCypher-driven biomedical KG integrating 34 human and 11 Drosophila data sources across genes, proteins, variants, diseases, ontologies, and annotations.
- Worked on CLI and Make-based pipelines for interactive and direct KG generation, supporting MeTTa, Prolog, Neo4j, Parquet, NetworkX, and KGX-style outputs.
- Improved operational reliability with pre-flight path validation, source-release detection, dataset provenance manifests, and changed-file loading workflows for Neo4j.

Team Leader - NeuroGraph AI Assistant

iCog Labs | October 2025 to April 2026

- Led a four-service AI platform with an integration REST API, AtomSpace/graph builder, neural subgraph miner, React/Remix annotation UI, and query backend.
- Designed service responsibilities, job-tracking workflows, Docker Compose deployment, and API handoffs across graph ingestion, analytics, mining, and visualization.
- Managed code reviews, implementation coordination, and production handoff while keeping backend, AI, and frontend services aligned.

Computer Scientist - Automation & Research Systems

iCog Labs | April 2023 to Present

- Built affected-area CI/CD testing, generated schema documentation from source code, and automated source update checks to reduce manual maintenance.
- Supported graph mining and biomedical analysis workflows by preparing NetworkX, Neo4j, and BioCypher data for downstream AI/research tools.

Backend Engineering

Python APIs, Knowledge Graph Pipelines & Deployment

- Built API-connected workflows around Python/FastAPI, Dockerized services, Neo4j graph loading, versioned data updates, and reproducible biomedical KG builds.
- Worked with large graph/data pipelines, config-driven adapters, schema configs, download managers, provenance records, and incremental reload patterns.

Projects

Coffee Plant Disease Detection API

Final Year Project | 2023 to 2024

Built an end-to-end ML and backend workflow for coffee plant disease classification, from data collection and labeling through model training, evaluation, API integration, and frontend delivery.

Campus PC Authentication System

Personal Project | 2023

Built a Flutter mobile app for university device registration, generating QR-code tags that security staff scan to verify device ownership.

Lounge Management System

Personal Project | 2022 to 2023

Developed a Java Swing desktop app for campus lounge inventory, customer ordering, and real-time order tracking.

Research & AI Context

Neural Subgraph Matcher Miner

Rejuve.Bio | Graph mining framework

Worked with neural subgraph matching/mining capabilities, FastAPI service access, Docker deployment, interactive HTML visualizations, and motif analysis workflows.

Neural Subgraph Mining Analysis of a Human Biological Knowledge Graph

Analysis Report | BioCypher KG, 2026

Analyzed a 150,619-node, ~20M-edge KG and characterized 11,311 discovered instances across 18 graph motifs.

TFLink and STRING Motif Analyses

Manuscripts | iCog Labs / Rejuve.Bio, 2026

Reported 503 recurrent regulatory pattern instances and 14,877 STRING PPI pattern instances across biological network analyses.

Education

B.Sc. in Computer Science

Addis Ababa University | Graduated: July 2024

Certifications

Coursera Specializations

- Supervised Machine Learning: Regression and Classification
- Neural Networks and Deep Learning
- Mathematics for Machine Learning: Linear Algebra
- Object-Oriented Design
